STEELYSYSTEMS

FOR ELITE TRADERS WHO KNOW

SteelyAlphaFlowX

Confluence scoring for NinjaTrader 8 · Flow, VWAP, levels & gamma

INDEX FUTURES · 30 CRITERIA · GAMMA-AWARE

What it does: SteelyAlphaFlowX scores each closed bar against 30 confluence criteria (order flow, VWAP bands, volume profile, key levels, trend, breadth, gamma levels), labels a signal when one side reaches the threshold, shows **which criteria scored**, and keeps re-scoring it afterward.

MNQ, 5-minute: BULL / BEAR signal labels with stars, scores and tags, level lines, and the HUD (top left); bar delta and CVD in the lower panel. Shown for illustration only.

NEW TO CONFLUENCE SCORING

Read the chart at a glance

Confluence means independent conditions agreeing at once. SteelyAlphaFlowX scores each for the bullish or bearish side and labels a signal when one side's total reaches the threshold.

▲ BULL ★★ (7)	A confirmed signal and its score: ★ under 6, ★★ 6–7, ★★★ 8+. Overnight, scores under 6 show only ▲ (n).
[MR-2σ↑] / [KLR]	The VWAP band that scored (MR mean-reversion, MOM momentum), or a Key Level Reversal at an HTF zone.
[⚠ EXHST?]	Score 8+ on a bar taller than ATR closing beyond the VWAP 2σ band: yellow label, no sound.
☒ INV / ◎ P1–P3	Invalidation 0.75 × ATR beyond the signal bar. Projections start at 1.5, 2.0, 4.5 × ATR (P3 6.1 on trend days); P2 needs ★★, P3 ★★★.
Health dots	Lime STRONG, yellow OK, orange DEGRADING, orange-red FAILING: the signal re-scored on each later bar. Drawn with Chart Detail Standard or Full.

Reading the HUD

State	POS GAMMA above the Gamma Flip, NEG GAMMA below, tagged [LIVE] or [STALE]; EMA ▲/▼ [no gamma] when no gamma levels are loaded.
Closed / Checks	Last bar's ▲/▼ scores and Min, the score needed now. Checks: the criteria that scored.
Health	STRONG / OK / DEGRADING / FAILING for the last signal.
Past	Past signals, hypothetical, not a forecast: the share of recent signals (score 6+) that reached P1, P2 or invalidation.

Hover any HUD row for a full explanation. Drag the panel anywhere; Status shows READY or what needs attention.

FOR EXPERIENCED TRADERS

The rules, exactly

Closed bars	Signals score the just-closed bar on the next bar's first tick. Pending alerts and the live strip are previews (markers with Chart Detail Standard or Full, the strip with Full).
Threshold	Profile: Conservative 7, Standard 6, Aggressive 5 (Prime 9, 8, 7); 2 lower outside 9:30–16:00 ET; volatility moves it −1 to +2. If both sides qualify, the higher wins.
Gates	Held back 3 bars and 8 minutes after a same-side signal, in news or macro blackouts, against your Session Bias, and while a monitored signal is STRONG/OK: other side below its score, same side below 7.
Gamma	On NQ and MNQ, in real time, the day's Gamma Flip, Put Wall and Call Wall load automatically (updated about 8:35 and 9:55 ET); ES, MES, history and Playback run without them. Above the flip, band scoring is mean-reversion (MR); below, momentum (MOM). Against regime and EMA stack: threshold +2 (Standard).
Health	Re-scored each bar: STRONG at or above its score, OK at or above the threshold, DEGRADING up to 2 below, else FAILING. Clears, dots removed, after 20 bars or sooner.

Get started in three steps

1. Find your license key and the download at whop.com/steelysystems (SteelyIndicators Download). Both are also in your purchase email.

2. In NinjaTrader 8: Tools › Import › NinjaScript Add-On, then select SteelyIndicators.zip (keep it zipped).

3. Right-click a chart › Indicators › add **SteelyAlphaFlowX** and paste your license key when asked. It starts with a clean chart; **Chart Detail** draws more.

Useful settings

Profile (Standard) · **Session Bias**, **News Time 1–3 (ET, HHMM)** and **Macro Event Today** (today only; set each day) · **Chart Detail** (Clean; Standard and Full draw more, Custom picks each item) · **Alert Sounds** (SignalsOnly) · **Settings Level** (Basic; Advanced and Expert show more).
